EDUCATION

Narsimha Reddy Engineering College **2020 - 2024**
Bachelor of technology in Artificial Intelligence & Machine Learning. (CGPA - 7.6* /10.0)
Trinity Jr. College **2018 - 2020**
MPC. (73.3%)
Mary Mediatrix High School **2018**
SSC Board. (92.0%)

EXPERIENCE

Game Developer Intern at Oxygen2Innvoation **DEC 2021 – FEB 2022**

- Developed realistic aircraft simulation physics, including gravity simulation, plane controls and explosions.

NLP Engineer at Visual Astro **JUL' 2023 - PRESENT**

- Collaborating with a team of engineers to build a realistic Astrology Software.

PROJECTS

Stock Movement Prediction | Live-Link | Source-Code | Video **APR' 2023 – MAY' 2023**

- Developed a stock movement prediction application using **LSTM** and **Flask**.
- Trained LSTM models on historical data to predict stock movements, providing users with valuable insights and predictions.

Text Generation | Source-Code | Video **FEB' 2023 – MAR' 2023**

- Developed an **LSTM**-based text generation model leveraging **NLP** techniques for embeddings and text processing.
- Trained the model using an eBook called "Adventure" from project-Gutenberg.

Movie Recommendation System | Live-Link | Source-Code | Video **FEB' 2023 – MAR' 2023**

- Created a movie recommendation system using **Machine Learning** and **Cosine Similarity.**
- Implemented dynamic website using **Flask, HTML, CSS,** and **Jinja**2 templates to provide a user-friendly. interface for personalized movie recommendations based on user entered plot.

Spam Classification | Source-Code | Video **JAN' 2023 – MAY' 2023**

- Developed a spam classification system using NLP techniques, machine learning algorithms like **SVM, Naïve Bayes,** and **Artificial Neural Networks.**
- Trained the system on a corpus of 40,000 unique words to accurately predict and classify spam emails, combining the strengths of traditional and deep learning models.

Sentiment Analysis | Source-Code **DEC' 2022 – MAR' 2023**

- Implemented sentiment analysis project using LSTM neural networks.
- Trained the system on a large dataset of textual data to accurately analyze and classify the sentiment of text, distinguish between positive and negative sentiments.

Games | Buck Man | Zombie Apocalypse | Void wars

- Developed small scale windows supported games using **Unity** game Engine, leveraging **C# scripting**.
- Utilized Unity's tools and features to implement game mechanics, user interface, and visual effects.

Skills

Technologies:	Machine Learning, Deep Learning, Natural Language Processing.
Languages:	Python, C, C++, HTML, CSS.
Libraries & Frameworks:	TensorFlow, Keras, NumPy, Matplotlib, Seaborn, Hugging face(transformers), Simple Transformers, Scikit-Learn, SciPy, NLTK, Spacy, Flask, Pandas, PySpark, Tensor Board.
Database:	MySQL, Sqlite3.
Familiar:	Java, R-programming, C#, Unity Game Development, Tableau, Dockers.
Version-Control:	Git, GitHub.

Achievements

- Achieved the 2nd position in Game Development at the NRCM college Hackathon (2023).
- Solved over 200+ problems DSA problems on Code Studio and attained level 6 status.
- Participated in the NRCM college Hackathon (2022) and achieved a top 15 placement in problem solving.

Certifications

- Completed Python course at Value Laden, showcasing proficiency in Python programming and practical application.
- Received Certificate of Completion in C++ from CodeStudio.
- Mastered Text Summarization using BERT at Great Learning, excelling in seq2seq models, and generating concise summaries from extensive texts.
- Received Certificate of Completion for Tableau course at Great Learning.

Hobbies & Interests

- **Hobbies**: I love spending my free time engaging in reading books and coding.
- **Interests**: Natural Language Processing, Research and development, Astronomy.
